# Contents

Preface ............................................................................. xvii

Prerequisites .................................................................xvii
Who Should Study This Course? .......................................xvii
Key Topics .......................................................................xviii
Course Objectives ..........................................................xviii
How Do I Use This Course? ................................................xix
  Real-World Scenarios ....................................................xix
  Pedagogy .....................................................................xix
  Key Terms ...................................................................xix
Resources Available in Instructor-Led Settings .......................xix
Why Choose WestNet? .....................................................xx

Introduction .....................................................................xxi

Course Overview ..........................................................xxi

Module 1
The Public Switched Telephone Network .......................... 1

Lesson 1
Telecommunications History ..........................................12
  Invention of the Telephone .............................................12
  1885: American Telephone and Telegraph ....................13
  1893: Initial Competition ..............................................13
  1908: Government-Approved Consolidation ..................13
  1934: Federal and State Regulation .................................14
  1956: The Hush-a-Phone Decision .................................15
  1956: The Consent Decree .............................................16
  1968: Carterfone Decision .............................................16
  1969: Competition From MCI .......................................17
  1984: Breakup and Divestiture .....................................17
    Regional Bell Operating Companies ............................18
    Local Access and Transport Areas ............................18
  1988: More Freedom for the RBOCs ............................19
<table>

Lesson 4
Central Office Switching ......................................................50
  The Talking Path .................................................................50
  Evolution of Telephone Switching ........................................52
    Step-by-Step Switching and Rotary Dial Telephones ..........55
    Crossbar Switching .......................................................57
    Later Electromechanical Switching ..................................58
    Digital Switches ..............................................................59
    DTMF Signaling ...............................................................59
  How a Call is Made .............................................................61
    Dial Tone ........................................................................61
    Entering a Telephone Number ..........................................61
    Call Routing ....................................................................61
    Ringing ............................................................................64
    Ending the Call ...............................................................65
  Long Distance Voice Routing ...............................................65
  Signaling .............................................................................66
    In-Band vs. Out-of-Band Signaling ..................................66
    Signaling System 7 ..........................................................66
  Telephone Numbering System ..............................................67
    The Dwindling Supply of Numbers .................................68
    Local Number Portability ................................................69
  Assigning Telephone Numbers ..............................................71
  Special Area Codes .............................................................71
  Special NXX Codes ............................................................71
    Special Information: 555 ................................................71
    Hearing-Impaired Services: 800-855 ..............................71
    Service Codes, or N11 Numbers ......................................71
    Toll-Free: 800, 888, 877, etc. ........................................72
    Premium: 900 ..................................................................72
    700 Services ....................................................................73
    Follow-Me: 500 ...............................................................73

Lesson 5
Trunks, Lines, and Loops .......................................................76
  Telecommunications Terms ...............................................77
  Loops ..................................................................................78
  Lines ....................................................................................78
  Trunks ..................................................................................79
    Trunk Direction ...............................................................80
    Trunk Capacity ...............................................................80
    Trunk Transmission Type ................................................80
      Analog Transmission ..................................................80
      Analog Bandwidth ......................................................82
      Digital Transmission ..................................................82
      Digital Bandwidth ......................................................83
  Channels and Multiplexing ...............................................84
    Multiplexing .................................................................84
Lesson 3
Private Branch Exchange ....................................................142
PBX Components .................................................................142
   Trunks ............................................................................143
Extension Lines .................................................................144
Equipment Cabinet ............................................................144
Telephones and Attendant Console .................................145
   Administrative Terminal ................................................146
Making a Call on a PBX .....................................................146
   Calling on an IP PBX .......................................................147
Call Routing ........................................................................147
Supplementary PBX Features .............................................148
   Direct Inward Dialing ......................................................149
   Direct Inward System Access .........................................150
   Uniform Dialing Plan .....................................................150
Station Set Features ...........................................................151
   Attendant Console Services ..........................................153
Call Accounting .................................................................154
   Authorization Codes ......................................................155
   Account Codes .............................................................155
   Administration and Management Reports ..................155
Call Detail Reports ..............................................................155
   Test Reports ................................................................156
   Busy-Hour Studies .......................................................156
PBX Enhancements .............................................................156
   Voice Response ............................................................156
   Voice Recognition .........................................................157
   Call Following ..............................................................157
   Automatic Call Distributor ............................................157
   Other Auxiliary Equipment .........................................158
   Paging Equipment ........................................................158
   Call Management System .............................................158
PBX Costs and Requirements .............................................159

Lesson 4
Voice Mail Systems ...........................................................163
   Voice Mail Features .......................................................163
   Voice Mail/ PBX Integration ..........................................164
   Design Factors ..............................................................165
   Unified Messaging ........................................................166
   Broadcasting ................................................................166
   Voice Mail Security .......................................................166
   Automated Attendants ..................................................168

Lesson 5
Systems Installation Considerations .................................171
   System Power Considerations .....................................171
   DC Power .....................................................................172
   AC Power .....................................................................172
Contents

Operator Assistance ................................................................. 207
Directory Listings ................................................................. 207
Package Deals ................................................................. 208
    Internet Call Waiting ....................................................... 208
Lesson 2
Signaling Basics ................................................................. 211
    Supervisory Signals ....................................................... 212
        Loop Start ................................................................. 212
        Ground Start .......................................................... 214
        E&M ....................................................................... 215
    Emulated Tie Trunks ........................................................ 216
    Wink Start ................................................................. 216
    Digital Signaling ......................................................... 217
Address Signals ................................................................. 218
    Dial Pulse Signaling ...................................................... 218
    Dual Tone Multifrequency Signaling ............................... 221
Alerting Signals ................................................................. 221
    Control Signals ............................................................ 221
    In-Band vs. Out-of-Band Signaling ................................. 222
Lesson 3
Digital Line Services .......................................................... 226
    The Significance of Digital Communications ....................... 226
    T1 Lines ....................................................................... 227
        T1 Bandwidth .......................................................... 227
    The Digital Signal Hierarchy ............................................. 228
    Digital Voice Transmission ............................................. 228
    Digital Data Transmission .............................................. 229
    Subscriber Line Carrier .................................................. 229
Integrated Services Digital Network .............................................. 230
    How ISDN Works ........................................................ 230
        Basic Rate Interface ................................................... 230
        Primary Rate Interface .............................................. 231
Channel Bonding and Non-Facility Associated Signaling .................... 232
Digital Transmission Methods ...................................................... 234
ISDN Voice Features ............................................................ 236
Required Hardware ............................................................... 237
    NT1: Network Termination, Type 1 .................................... 238
    NT2: Network Termination, Type 2 .................................... 238
    TA: Terminal Adapter .................................................... 238
    TE1, TE2: Terminal Equipment, Types 1 and 2 .................... 238
        R, S, T, and U Interfaces ........................................... 238
Synchronous Optical Network ...................................................... 239
    How SONET Rings Work ............................................... 240
Digital Subscriber Line ........................................................... 241
Lesson 4
Connecting to the Internet .................................................. 246
The Internet Hierarchy .......................................................... 246
Tier 1 .............................................................................. 247
Tier 2 .............................................................................. 247
Autonomous Systems ......................................................... 247
Network Access Points ...................................................... 247
How the Hierarchy Works .................................................. 248
Internet Service Providers .................................................. 248
Single-User Dial-Up Access .............................................. 249
Connecting a Business to an ISP ........................................ 250
Non-Dedicated Access ...................................................... 251
Dedicated Access ............................................................ 252
Components of a Dedicated Connection ......................... 252
Common Carrier Connection ............................................. 253
Channel Service Unit/Data Service Unit ......................... 254
Broadband Modem .......................................................... 254
Router .............................................................................. 254
Getting an Internet Address ............................................. 255
Summary .......................................................................... 258
Quiz ................................................................................ 259

Module 4
Internet Telephony .............................................................. 263

Lesson 1
The TCP/IP Protocol Suite .................................................. 273
TCP/IP Protocol Layers and the OSI Model ....................... 273
The OSI Stack .................................................................... 274
The TCP/IP Model Layers ................................................ 274
Network Interface Layer Protocols .................................. 275
Internetwork Layer Protocols .......................................... 275
Transport Layer Protocols ............................................... 276
Application Layer Protocols .......................................... 277
Communication Using TCP/IP .......................................... 278
Application Layer ............................................................ 278
Transport Layer ............................................................... 279
Network Layer ................................................................. 279
Network Interface Layer .................................................. 279
Destination Station .......................................................... 280

Lesson 2
IP, UDP, and TCP ............................................................... 283
Overview of IP .................................................................... 284
Best-Effort Service ............................................................ 285
Multiplexing Protocols ..................................................... 285
IP Packet Encapsulation ................................................... 286
IP Addresses ...................................................................... 286
Contents

Class A Address ................................................................. 287
Class B Address ................................................................. 287
Class C Address ................................................................. 287
Class D Address ................................................................. 288
Class E Address ................................................................. 288
Dotted Decimal Notation ....................................................... 288
Getting an IP Network Address ........................................... 289
   Public Networks ............................................................. 289
   Private Networks ........................................................... 289
UDP and TCP ................................................................. 291
   Demultiplexing Based on Port Number ......................... 291
Types of Port Numbers ...................................................... 293
Well-Known Port Numbers .................................................. 293
Ports and Addressing ......................................................... 294

Lesson 3
Packet Telephony ............................................................. 299
   How Packet Telephony Works ........................................ 300
   Packet Telephony Standards ......................................... 301
   Packet Telephony Architectures ..................................... 303
      IP Trunks Between Sites ............................................. 303
      IP Trunks and Telephones ......................................... 305
         Call Processing on IP Telephones and Trunks .......... 307
   LAN-Based PBX Systems .............................................. 308
   Internet VoIP Service .................................................... 308
Summary ............................................................................ 312
Quiz .................................................................................. 313

Module 5
Convergence and VoIP ..................................................... 317

Lesson 1
Overview of Telecommunications Standards ...................... 319
   ITU-T Protocols ............................................................. 319
      Commercial Telecom Standards ................................. 320
      Codecs ....................................................................... 320
      Multimedia Call Control and Signaling ...................... 321
         H.32x–Multimedia over Data Networks .................... 321
         Call Setup, Signaling, and Control Protocols ............ 321
         Supplementary Packet Telephony Services ............... 323
      ISDN Protocols .......................................................... 323
      ISDN Switching and Signaling Protocols ..................... 324
      Terminal Protocols ..................................................... 324
      Data Communications Over the Voice Network .......... 325
      Packet Data Network Protocols ................................. 325
   IEEE .......................................................................... 326
   ANSI ............................................................................ 326
   Telcordia ..................................................................... 327
Introduction to Telecommunications

EIA and TIA ................................................................. 328
IETF ........................................................................ 329
RFCs ........................................................................ 329
Internet Standards ................................................ 329
BCP ........................................................................ 329

Lesson 2

General QoS Concepts .............................................. 333
Network Requirements for Convergence ............... 333
Converged Network Architecture ....................... 334
   A Hybrid Approach to Convergence .................. 334
Parallel WAN Paths for QoS ................................. 335
Application-Level QoS ............................................. 336
Voice Quality ............................................................ 336
The QoS Parameters ................................................. 336
   Bandwidth .............................................................. 338
   Throughput .......................................................... 338
   Delay ................................................................. 339
      Encoding, Decoding, and Compression .......... 340
      Packetization .................................................. 340
   Jitter ................................................................. 341
      Jitter Buffers .................................................... 341
      Measuring Jitter .............................................. 342
   Wander ............................................................... 343
   Packet Loss ........................................................ 343
   Availability .......................................................... 344
   Security ............................................................... 345

Lesson 3

Admission Control and Traffic Shaping ................... 349
   Admission Control ............................................. 349
   Traffic Shaping .................................................. 351
      Traffic Smoothing .......................................... 352
      Traffic Burst Shaping .................................... 353
   Network Admission Policies ............................... 353
   Admission Control and Traffic Shaping Applications 355

Lesson 4

Traffic Prioritization ................................................. 359
   802.1Q VLAN Standard ..................................... 359
      The VLAN Tag ............................................... 359
   802.1Q as an Architecture .................................. 361
   802.1Q Protocols ............................................... 361
   802.1p Traffic Prioritization Standard ................ 362
      Priority Tags and Traffic Classes ................... 362
      How 802.1p Prioritizes Traffic ....................... 363
      Mapping 802.1p Traffic Prioritization to IP and ATM Networks 364
Lesson 5
H.323 Standard for Packet Multimedia ..............................368
Overview of the H.323 Standard ........................................368
  Version 1: Videophone ..................................................369
  Version 2: Packet-Based Multimedia ..............................369
  Version 3: Under Development .......................................369
Other Standards of the H.323 Family ................................369
Fundamental H.323 Network Components ..........................370
  Terminals .................................................................370
  MCUs ......................................................................370
  Gateways ...............................................................371
  Gatekeepers .............................................................372
MGCP .................................................................373
  MGCP Network Components ........................................373
    MG .................................................................374
    MGC .................................................................375
The H.323 Protocols and Their Effect on Voice Stream QoS .......375
H.323 Protocols ..........................................................375
  Audio Codecs .........................................................376
    Silence Suppression .................................................377
    G.711 Companding Algorithms .................................377
    MOS .................................................................378
    Audio Codec Delays ...............................................379
    DSPs .................................................................379
    DSP Delays ..........................................................380
RTP .................................................................380
  Time Stamping .........................................................380
  Sequencing ............................................................381
eRTCP .................................................................381
RAS: H.225 ............................................................381
Call Signaling: H.225 ..................................................382
Control Signaling: H.245 ..............................................382
H.323 Protocol Limitations ..............................................382
Document Conferencing: T.120 Series ..............................382
Integration with the Digital PSTN .....................................383
  ISDN/VoIP Integration ..............................................383
  Adding SS7 to VoIP ................................................384
Network Infrastructure Requirements ..................................385

Lesson 6
H.323 Call Processing .....................................................389
  H.323 Call Progression Phases .....................................389
    Gatekeeper Discovery and Registration: H.225 RAS ....390
    Call Setup and Signaling: H.225 ............................391
    Control Signaling: H.245 ....................................394
    Call Termination: H.245/H.225 ............................396
  H.323v2 fastStart ..................................................397
SIP .................................................................398
SS7 to ITSP Call Progression .........................................399
Lesson 7
Session Initiation Protocol ................................. 405
  SIP .................................................................... 405
  SIP Messages .................................................. 407
    Request Messages ............................................ 407
    SIP Addresses .............................................. 408
    Request Message Format .............................. 408
  Response Messages ........................................ 409
    Response Message Format ......................... 410
  SIP Servers ...................................................... 410
  Proxy ............................................................. 410
  Redirect .......................................................... 411
  Registrar ........................................................ 411
  SIP Clients ...................................................... 411
  SDP ............................................................... 411
  Creating a SIP Session ................................... 413

Lesson 8
Approaches to IP Network QoS .............................. 417
  IP Header Features .......................................... 417
    ToS Field .................................................... 417
    IP Precedence ............................................ 418
  DiffServ ....................................................... 418
    DSCP Code Points ....................................... 418
    PHB .......................................................... 419
      Standard PHBs ......................................... 419
      Custom PHBs .......................................... 420
    DiffServ Domains ....................................... 420
  IntServ ......................................................... 420
  RSVP ........................................................... 420
  CBQ ............................................................. 421
  COPS ........................................................... 422
  MPLS ........................................................... 424
  Policy Routing ............................................... 426
  PQ ............................................................... 426
  RED ............................................................. 426
  Traffic Shaping .............................................. 426
  WFQ ............................................................. 427
  WRED ........................................................ 427

Lesson 9
CO Softswitches .................................................. 430
  What is a Softswitch? ....................................... 430
  Softswitches in Telecomm ............................... 431
  Leveraging Legacy Networks ......................... 432
  Who is Using Softswitches? ............................ 432
  Local Voice Switching ................................... 433
  Toll Bypass .................................................... 436
  Features and Benefits of Softswitch Systems ....... 437
